### 16 2 Evolution As Genetic

Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.

#### Evolution - Wikipedia

The gene-centered view of evolution is a model for the evolution of social characteristics such as selfishness and altruism.. Acquired characteristics. The formulation of the central dogma of molecular biology was summarized by Maynard Smith: . If the central dogma is true, and if it is also true that nucleic acids are the only means whereby information is transmitted between generations, this ...

"Major transitions in evolution - such as the origin of life, the emergence of eukaryotic cells, and the origin of the human capacity for language, to name but a few - could not be farther from an equilibrium.

#### General Rebuttal to the Theory of Evolution

Darwin and Natural Selection. Most educated people in Europe and the Americas during the 19th century had their first full exposure to the concept of evolution through the writings of Charles Darwin. Clearly, he did not invent the idea. That happened long before he was born. However, he carried out the necessary research to conclusively document that evolution has occurred and then made the ...
