After using aNUT's very helpful thread to help me re-do my vacuum lines, I decided to re-make his diagrams into more complete, readable, printable, noob-friendly forms. I used his diagrams in combination with TonyJetta's labels. They're color coded so that you don't start looking at one and accidentally look at a different one next time you take a glance.

The cam position sensor is critical to the proper functioning of the engine management system in its timing of engine events. The sensor delivers information on the position of the camshaft that actuates the engine's intake valves to the computer, which uses that information to deliver fuel and spark at the correct time.

The Diesel engine (also known as a compression-ignition or CI engine), named after Rudolf Diesel, is an internal combustion engine in which ignition of the fuel, which is injected into the combustion chamber, is caused by the elevated temperature of the air in the cylinder due to the mechanical compression (adiabatic compression). Diesel engines work by compressing only the air.

Abstract: The purpose of the fuel injection system is to deliver fuel into the engine cylinders, while precisely controlling the injection timing, fuel atomization, and other parameters. The main types of injection systems include pump-line-nozzle, unit injector, and common rail. Modern injection systems reach very high injection pressures, and utilize sophisticated electronic control methods.

This motor is the king of electric car motors. It's also the king of torque! The electric drag racers burn a lot of tire rubber with this motor, and if laying down long black tracks and clouds of smoke is your thing, this is the motor you want.. The Good: All the torque is available from a standstill. You've no doubt heard about this famous characteristic of electric cars.
