- The majority of chemical reactions discussed here occur in aqueous solution. – When you run reactions in liquid solutions, it is convenient to dispense the amounts of reactants by measuring outvolumes of reactant solutions. Figure 4.11: (a) A measuring pipet is graduated and can be used to measure various volumes of liquid accurately.

The solubility product constant, K_{sp} , is the equilibrium constant for a solid substance dissolving in an aqueous solution. It represents the level at which a solute dissolves in solution. The more soluble a substance is, the higher the K_{sp} value it has. Consider the general dissolution reaction below (in aqueous solutions):
